

Introduction to HTML

HTML (HyperText Markup Language) is the standard language for creating web pages. It is a markup language that defines the structure of web content using tags.

Basic HTML Example

Here is a basic HTML code example:

```
<!DOCTYPE html>
<html>
  <head>
    <title>Web4U</title>
  </head>
  <body>
    <h1>Welcome to Web4U</h1>
    <p>This is a paragraph of text in HTML.</p>
  </body>
</html>
```

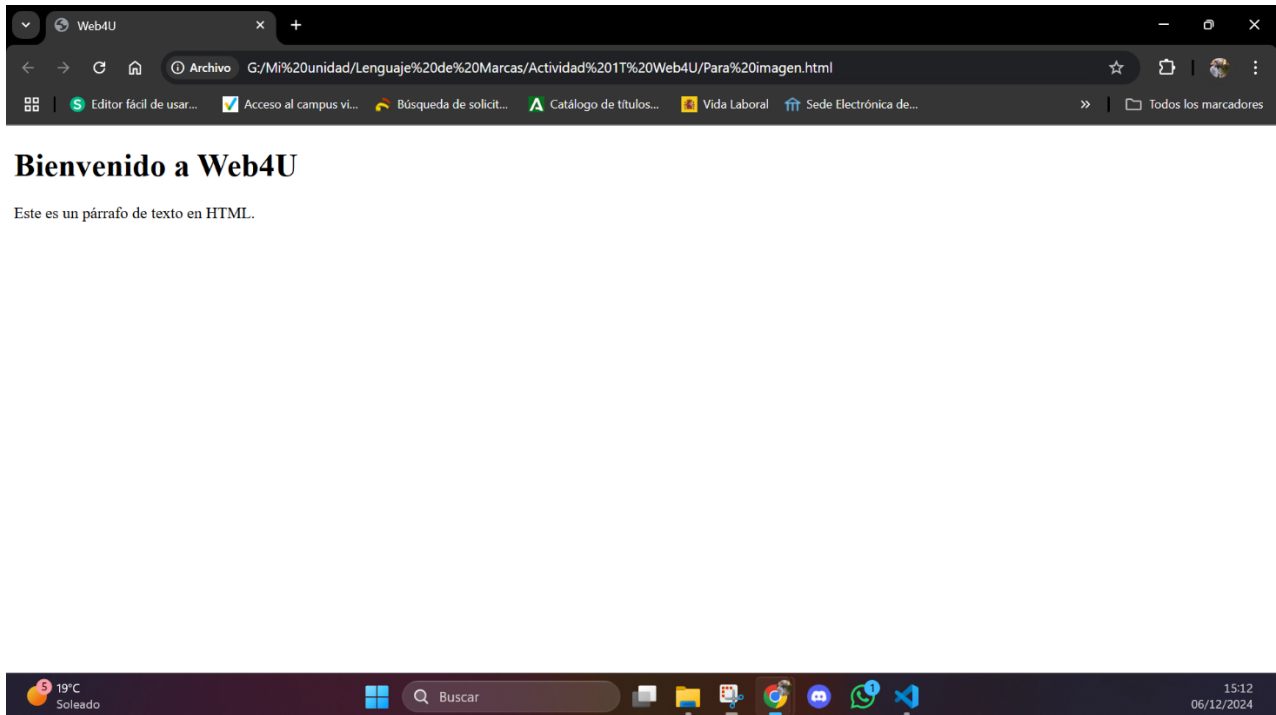

Code Explanation:

The code above describes the basic structure of an HTML page:

- **<html>**: Defines the beginning of the HTML document.
- **<head>**: Contains metadata like the page title.
- **<title>**: Sets the title displayed in the browser tab.
- **<body>**: Contains the visible content of the page.
- **<h1>**: The main heading of the page.
- **<p>**: A paragraph of text.

Browser Output

When viewed in a browser, the code will render as follows:
